PROFESSIONAL SUMMARY

Final-year B.Tech student in Artificial Intelligence and Data Science with internship and project experience in front-end development, Python-based AI/ML, deep learning, Generative AI, and prompt engineering. Built AI-powered application concepts for industrial monitoring, smart agriculture, and civic issue reporting using React, JavaScript, Python, and LLM-based tools, and developed deep learning workflows for astronomical image processing. Seeking entry-level opportunities in AI engineering, data analytics, or related technology roles.

TECHNICAL SKILLS

Programming: Python, JavaScript, C (basic), SQL
AI & Generative AI: Machine Learning, Classification, Regression, Data Pre-processing, Feature Engineering, Model Evaluation, Deep Learning (CNN, Autoencoder, U-Net), Image Processing, Prompt Engineering, LLM Applications, Google Gemini, ChatGPT, Claude
Data Analysis: Pandas, NumPy, Excel/CSV, Matplotlib
Web Development: HTML, CSS, JavaScript, React
Tools & Platforms: Git, GitHub, VS Code, Google Colab, MySQL, Supabase, Figma

INTERNSHIP EXPERIENCE

Front-End Developer Intern | Strydo Technologies Pvt. Ltd. | Vellore
- Gained practical experience in front-end development through internship tasks and project-based work.
- Worked with web technologies to support user-interface implementation and application presentation.

Machine Learning Intern | Prodigy InfoTech | Remote
- Worked on Python-based supervised learning tasks involving classification and regression.
- Practiced data preprocessing, feature engineering, model evaluation, and hyperparameter tuning.

Prompt Engineering & AI Intern | SkillCraft Technology | Remote
- Designed and refined prompts for Generative AI and large language model use cases.
- Evaluated LLM outputs and documented prompt approaches to improve relevance and quality.

PROJECTS

OptiFlow TN — AI-Powered Industrial Digital Twin Platform
Technologies: Python, Machine Learning, React, Excel/CSV, Data Visualization
- Created a digital-twin platform concept that turns factory data into interactive visual models.
- Developed predictive-maintenance and AI-assisted decision-support features; project was piloted at ICF Chennai.

Agri-Neural Twin — Smart Agriculture Digital Twin
Technologies: React, Gemini AI, Supabase, JavaScript, Geospatial Mapping
- Developed a precision-agriculture concept with nutrient-runoff prediction and multilingual AI assistance.
- Designed a geospatial dashboard concept for farm-health monitoring and crop-management support.

CivicFix — AI-Powered Civic Issue Reporting System
Technologies: React, Machine Learning, Supabase, GPS Integration
- Built a civic issue-reporting platform concept supporting text, voice, image, and GPS-based reports.
- Added AI-assisted complaint verification and an administrative tracking dashboard concept.

Astronomical Image Processing — Deep Learning for Image Enhancement
Technologies: Python, Deep Learning, CNN, Autoencoder, U-Net
- Developed deep learning workflows for astronomical image processing, enhancement, and feature extraction.
- Explored CNN, Autoencoder, and U-Net architectures for image analysis, focusing on preprocessing techniques and AI-driven research applications.

EDUCATION

B.Tech, Artificial Intelligence and Data Science | C. Abdul Hakeem College of Engineering and Technology, Anna University
Expected graduation: 2027 | CGPA: 8.6/10

ADDITIONAL INFORMATION

- Participated in technical hackathons and completed internship assignments in front-end development, machine learning, and prompt engineering.
- Interests: Generative AI, LLM applications, machine learning, data analytics, digital twins, and computer vision.
